Project Scope Management

Topic # 4A

Chapter 5 – Schwalbe

Chapter 5 – PMBOK

Scope

- **Product scope:** The features and functions that characterize a product, service, or result; and/or
- **Project scope:** The work performed to deliver a product, service, or result with the specified features and functions.
- The term project scope is sometimes viewed as including product scope.

Scope Statement

- Should be concise & clear.
- Vary with project types.
- The scope statement should include:
  - **A project Justification:** The business need that sparked the creation of the project
  - **Brief Description of Project's Products:** It summarizes the characteristics of products or services that the project will produce.
  - **Summary of Project Deliverables**
  - **Statement of Project Success Criteria:** A quantifiable criteria that must be met for project success.

Scope Statement

- **Project exclusion:** Explicitly stating what is out of scope for the project.
- **Constraints:** A limiting factor that affects the execution of a project or process. For example: a predefined budget or any imposed dates or schedule milestones, contractual provisions
  - Information on constraints may be listed in the project scope statement or in a separate log.
- **Assumptions:** A factor in the planning process that is considered to be true, real, or certain, without proof or demonstration.
  - Also describes the potential impact of those factors if they prove to be false.

Establishing project scope and objectives

- 1.1 Identify objectives and measures of effectiveness
  - 'how do we know if we have succeeded?'
- 1.2 Establish a project authority
  - 'who is the boss?'
- 1.3 Identify all stakeholders in the project and their interests
  - 'who will be affected/involved in the project?'

Setting objectives

- Answering the question '*What do we have to do to have a success?'*
- Need for a *project authority*
  - Sets the project scope
  - Allocates/approves costs
- Could be one person - or a group
  - Project Board
  - Project Management Board
  - Steering committee

Objectives

Informally, the objective of a project can be defined by completing the statement:

The project will be regarded as a success if……..

Rather like *post-conditions* for the project

Focus on *what* will be put in place, rather than *how* activities will be carried out

Objectives/Goal should be SMART

S – specific, that is, concrete and well-defined

M – measurable, that is, satisfaction of the objective can be objectively judged

A – achievable, that is, it is within the power of the individual or group concerned to meet the target

R – relevant, the objective must relevant to the true purpose of the project

T – time constrained: there is defined point in time by which the objective should be achieved

Goals/sub-objectives

These are steps along the way to achieving the objective. Informally, these can be defined by completing the sentence…

Objective X will be achieved
IF the following goals are all achieved
A……
B……
C…… etc

Goals/sub-objectives continued

Often a goal can be allocated to an individual.

Individual may have the capability of achieving goal, but not the objective on their own e.g.

Objective – user satisfaction with software product

Analyst goal – accurate requirements

Developer goal – software that is reliable

Measures of effectiveness

How do we know that the goal or objective has been achieved?

By a practical test, that can be objectively assessed.

e.g. for user satisfaction with software product:

- Repeat business – they buy further products from us
- Number of complaints – if low etc etc

Quantifying benefits

Benefits can be:

- Quantified and valued e.g. a reduction of *x* staff saving *£y*
- Quantified but not valued e.g. a decrease in customer complaints by *x%*
- Identified but not easily quantified – e.g. public approval for a organization in the locality where it is based

12

Scope Statement of a game

- **Project Title:** Bouncy Bunny Counts Money
- **Project Justification/ Business Need:** Our company has a hole in the market when it comes to children's items. *Bouncy Bunny Counts Money* will fulfill this hole and further boost sales of our accounting software market to parents of the children using this game.
- **Project Scope:** This project will consist of creating a marketable game based upon the *Bouncy Bunny Counts Money* comics on our website. The project will be completed by December, 2010. Modules of the game will include a simple shopping game, a way for Bouncy Bunny to earn money, and a way to motivate players to continue to play.

Scope Statement of a game

- **Project Deliverables:**
  - Scope Statement
  - Progress Reports
  - Issues Reports
  - Weekly Meeting Notes
  - Testing Strategy & Acceptance Testing Document
  - Final Game
  - User Guide
- **Project Success:** The project will be determined successful if the game sells.

Scope statement Example: Errors

- There might be way more deliverables than listed.
- Team Members & Important Stakeholders are not listed.
- It will be important for this project team to further define what project success will look like. How many copies should sell? How long should they take to sell?
- In the project justification, it is mentioned that this project is to also boost sales of company x's accounting software. How many units of that should be sold?

Scope statement Example: Errors

- In order to run a successful project, it will be important for stakeholders to see a timeline and to note important milestones. For instance, when will the game concept art be due? When will the scripting be complete? When will the product packaging be completed?
- There is no budget included. How much will it cost to create *Bouncy Bunny Counts Money*? How many employees will be required?
